At a glance

The state-of-the-art R&S®SMBV100B vector signal generator sets new standards in its class. Ultra high output power, fully calibrated wideband signal generation and intuitive touchscreen operation make the R&S®SMBV100B ideal for all kinds of applications.

The R&S®SMBV100B vector signal generator combines superior performance characteristics such as high output power, wide modulation bandwidth and excellent signal quality. With a frequency range from 8 kHz to 6 GHz, the instrument covers all important RF bands for digital wireless communications. The wide RF modulation bandwidth of up to 500 MHz satisfies the challenging requirements of fourth and fifth generation communications standards. In A&D applications, the wide bandwidth allows the generation of complex pulsed signals.

In many test setups, such as for RF component verification, it is important to provide signals at high power levels. The R&S®SMBV100B offers best-in-class signal quality up to very high power levels. No extra amplifier is needed, which simplifies the test setup.

The R&S®SMBV100B has an intuitive touchscreen GUI and is therefore very ergonomic and practical to use. The customizable instrument is also prepared to meet future requirements. Options can be added via software keycodes, making it easy to enhance the instrument with additional functionality, e.g. by extending frequency, bandwidth and output power.

Key facts

- Frequency range from 8 kHz to 3 GHz or 6 GHz
- Ultra high output power up to +34 dBm
- 500 MHz modulation bandwidth with perfect accuracy
- Excellent EVM and ACPR results up to high power levels
- Internal signal generation for all major digital communications standards
- Fully-fledged GNSS simulator for GPS, GLONASS, Galileo, BeiDou and QZSS/SBAS
- Convenient operation via 7" touchscreen

Perfect for signal quality

- New realtime, user-defined frequency response correction to compensate for the effect of test fixtures
- Very low single-sideband (SSB) phase noise: < –134 dBc (meas.) at 1 GHz and 20 kHz offset
- Wide modulation bandwidth with perfect accuracy: modulation frequency response of < 0.3 dB (meas.) across 500 MHz bandwidth
- Excellent EVM and ACPR up to high power levels

Perfect for output power

- Ultra high output power: up to +34 dBm at 1 GHz
- Excellent level accuracy for CW and modulated signals: level linearity of < 0.2 dB (meas.)

Perfect for use

- Convenient operation via 7" touchscreen
- Automation made easy with context-sensitive help system and SCPI recording
- Internal realtime signal generation
- Protecting user data

Perfect for upgrading

- Easy upgrading of instrument at customer premises via software keycodes
- Time-limited licenses and waveform package for software options

Perfect for GNSS testing

- Take control over your GNSS scenarios
- Signals, systems and scenario configuration

R&S®LegacyPro: refresh your T&M equipment

- Replace your legacy signal generators: emulation of generators from Rohde & Schwarz and other vendors (e.g. R&S®SMBV100A, Keysight MXG/EXG, Aeroflex, Anritsu)

Definitions

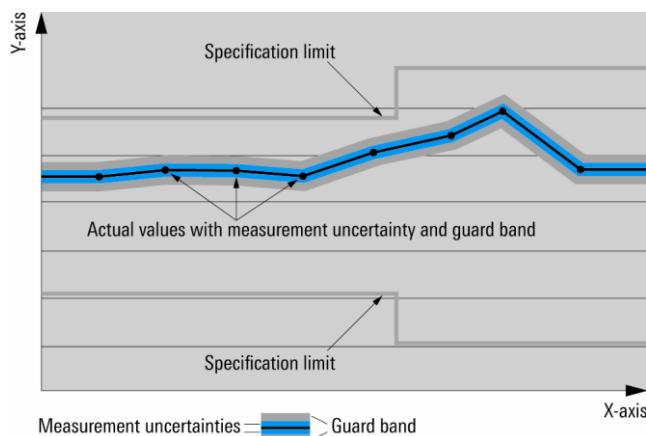

General

Product data applies under the following conditions:

- Three hours storage at ambient temperature followed by 30 minutes warm-up operation
- Specified environmental conditions met
- Recommended calibration interval adhered to
- All internal automatic adjustments performed, if applicable

Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as $<$, \leq , $>$, \geq , \pm , or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value (e.g. dimensions or resolution of a setting parameter). Compliance is ensured by design.

Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with $<$, $>$ or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter (e.g. nominal impedance). In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Device settings and GUI parameters are indicated as follows: "parameter: value".

Non-traceable specifications with limits, typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

In line with the 3GPP/3GPP2 standard, chip rates are specified in Mcps (million chips per second), whereas bit rates and symbol rates are specified in Gbps (billion bits per second), Mbps (million bits per second), kbps (thousand bits per second), Msps (million symbols per second) or ksps (thousand symbols per second), and sample rates are specified in Msample/s (million samples per second). Gbps, Mcps, Mbps, Msps, kbps, ksps and Msample/s are not SI units.

| | Loop through of input to output ² | • | • | • |
| | 1 GHz output frequency | – | – | • |

R&S®SMBVB-K704 option (flexible reference input from 1 MHz to 100 MHz)

When this option is installed, the user can set the variable reference input frequency in 0.1 Hz steps between 1.0 MHz and 100 MHz.

The signal generator will lock its internal 10 MHz reference oscillator on the input frequency.

R&S®SMBVB-B3 option (100 MHz, 1 GHz ultra low noise reference input/output)

When this option is installed, the user can apply a 1 GHz reference signal to the dedicated SMA connector. The signal generator will lock its internal 500 MHz reference oscillator on the 1 GHz reference. This option should be used if a very high phase stability between multiple generators is required.

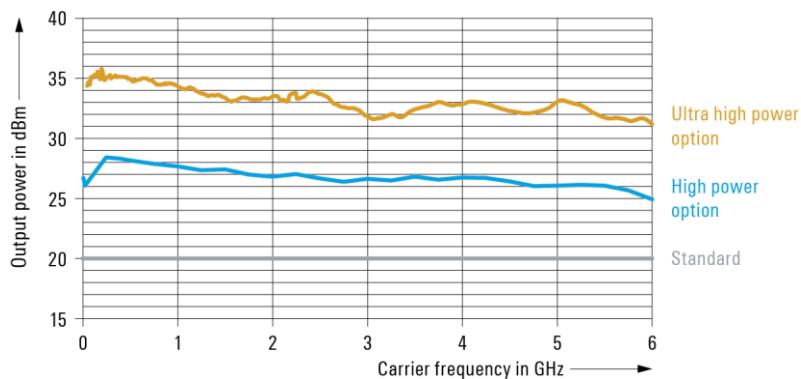

Also, the 100 MHz input frequency mode is only available with this option. The signal generator will lock its internal 500 MHz reference oscillator on the 100 MHz reference.

¹ Works only within the input frequency ranges from 5 MHz to 13 MHz and from 95 MHz to 100 MHz.

² Not available with all external input reference frequencies.

Digital baseband inputs/outputs

Depending on the installed software and hardware options, the R&S®SMBV100B is able to receive digital baseband signals and output digital baseband signals. The digital I/Q input/output can be used for the lossless connection of the R&S®SMBV100B to the digital I/Q input/output of other Rohde & Schwarz instruments.

Baseband enhancements

Additive white Gaussian noise (AWGN, R&S®SMBVB-K62 option)

Addition of an AWGN signal of settable bandwidth and settable C/N ratio or E_b/N₀ to a wanted signal. If the noise generator is used, a frequency offset cannot be added to the wanted signal.

| Noise | | |
|-------------------------------------|---|---|
| Distribution density | | Gaussian, statistical, separate for I and Q |
| Crest factor | | > 15 dB |
| Periodicity | | > 3 × 10 ¹⁰ s |
| C/N, E _b /N ₀ | | |
| Setting range | depending on the set RF level; the PEP of the sum signal (wanted signal + noise) must not exceed the maximum possible PEP of the RF path | -50 dB to +45 dB |
| Setting resolution | | 0.01 dB |
| Uncertainty | for system bandwidth = symbol rate, symbol rate < 4 MHz, -24 dB < C/N < 30 dB and crest factor < 12 dB | < 0.1 dB |
| System bandwidth | bandwidth for determining noise power | |
| Setting range | standard | 1 kHz to 120 MHz |
| | with R&S®SMBVB-K523 option | 1 kHz to 240 MHz |
| | with R&S®SMBVB-K523 and R&S®SMBVB-K524 options | 1 kHz to 500 MHz |
| Setting resolution | | 100 Hz |

BER measurement (R&S®SMBVB-K80 option)

In bit error rate (BER) measurement mode, the data supplied by the DUT is compared with a reference pseudo-random bit sequence.

| | | |
|--|---|--|
| Clock | | supplied by DUT; a clock pulse is required for each valid bit |
| Clock rate | | 100 Hz to 100 MHz |
| Data | PRBS sequence length pattern ignore data enable modes restart modes | 9, 11, 15, 16, 20, 21, 23 off, All 0, All 1 external off, high, low external on/off |
| Synchronization time | | 28 clock cycles |
| Interface | 4 BNC connectors, selectable from USER 1 to 5 | |
| Clock, data, enable and restart inputs | input impedance trigger threshold setting range setting resolution | 1 kΩ, 50 Ω 0.1 V to 2.0 V 0.1 V |
| Polarity | data, clock, data enable | normal, inverted |
| Measurement time | | selectable by means of maximum number of data bits or bit errors (max. 2 ³¹ bit each), continuous measurement |
| Measurement result | if selected number of data bits or bit errors is attained | BER in ppm, % or decade values |
| Status displays | | not synchronized, no clock, no data |

BLER measurement (R&S®SMBVB-K80 option)

In block error rate (BLER) measurement mode, arbitrary data can be provided by the DUT. A signal marking the block's CRC has to be provided on the data enable connector of the BER/BLER option.

| | | |
|--------------------------------|--|---|
| Clock | supplied by DUT; a clock pulse is required for each valid bit | |
| Clock rate | 100 Hz to 100 MHz | |
| Data | input data | arbitrary |

| | modes | high, low |
| CRC | CRC type | CCITT CRC16 ($x^{16} + x^{12} + x^5 + 1$) |
| | CRC bit order | MSB first, LSB first |
| Synchronization time | 1 block | |
| Interface | 4 BNC connectors, selectable from USER 1 to 5 | |
| Clock, data, and enable inputs | input impedance | 1 kΩ, 50 Ω |
| | trigger threshold | |
| | setting range | 0.1 V to 2.0 V |
| | setting resolution | 0.1 V |
| Polarity | data, clock, data enable | normal, inverted |
| Measurement time | selectable by means of maximum number of received blocks or errors (max. 2^{31} blocks each), continuous measurement | |
| Measurement result | if selected number of received blocks or errors is attained | BLER in ppm, % or decade values |
| Status displays | not synchronized, no clock, no data | |

Envelope tracking (R&S®SMBVB-K540 option)

With this option, the analog I/Q outputs can be used to generate an analog signal corresponding to the envelope of the I/Q signal to test envelope tracking modulators.

Prerequisite: R&S®SMBVB-K17 option must be installed.

| | |
|----------------------------|-------------------------------------|
| State | on/off |
| Algorithm | clipping and filtering |
| Desired crest factor delta | -20 dB to 0 dB |
| Max iterations | 1 to 10 |
| Filter mode "simple" | |
| Signal bandwidth | 0 Hz to input file sample rate |
| Channel spacing | 0 Hz to input file sample rate |
| Filter mode "enhanced" | |
| Passband frequency | 0 Hz to ½ of input file sample rate |
| Stopband frequency | 0 Hz to ½ of input file sample rate |
| Maximum filter order | 21 to 300 |

Digital modulation systems

The specified data applies together with the parameters of the respective standard. The entire frequency range, the filter parameters and the symbol rates can be set by the user.

Internal digital standards

Digital standards that run on the internal baseband generator. The R&S®SMBVB-K520 option must be installed. The options are described in the Digital Standards for Signal Generators data sheet (PD 5213.9434.22).
